Examples of damage to tubing

Damage caused by a puncture

Damage caused by accidental screw drilling

Repairing damaged tubing

Step 1

Cut a new piece of pipe to replace damaged portion.

Step 2

Apply PVC glue to the exterior of the existing tubing.

Important: Do not apply glue to interior of couplers.
Step 3
Install coupler to the piece of pipe that had glue applied. Twist coupler for stronger bond.

Step 4
Apply PVC glue to the exterior of the new piece of tubing to be installed.

Step 5
Install new piece of pipe to coupler. Twist pipe for stronger bond.

Step 6
Complete installation by connecting new piece of pipe to the other side by repeating steps 2-5.
